JISS — MVP Product Requirements Document

Product: JISS (Jasa Information & Security System)
Document Type: MVP Product Requirements Document
Version: 0.1 — Working Draft
Product Category: Executive Dashboard & Security Operations Management System
Platform: Web Application
Status: Draft for Stakeholder Validation

---

1. Product Overview

1.1 Background

JISS is an internal executive dashboard designed to centralize information and business processes related to security service projects.

The system supports the management of client projects, contract documents, personnel requirements, operational readiness, personnel deployment, and contract monitoring.

Currently, these processes involve multiple departments, including Marketing, Operations, Recruitment, HR, Procurement, Finance, and BOD.

JISS aims to provide a centralized platform where each department can access relevant information, perform assigned tasks, monitor progress, and collaborate throughout the project lifecycle.

1.2 Product Vision

To provide a centralized operational management platform that helps the company monitor security projects, manage personnel deployment, and maintain visibility across business operations.

1.3 Main Objectives

1. Centralize project and client information.

2. Improve visibility into project readiness and operational status.
3. Simplify cross-department workflows and approvals.
4. Monitor personnel allocation across projects and locations.
5. Track contract validity, expiration, and renewal.
6. Provide management with reliable operational information for decision-making.

1.4 Target Users

JISS serves nine primary user roles:

Role	Primary Responsibility
Marketing	Client and project management
Operations	Operational readiness and personnel requirements
Recruitment	Personnel sourcing and fulfillment
HR	Personnel registration and assignment
PIC Area	Field operation confirmation
Procurement	Equipment and material readiness
Finance	Financial assessment and contract verification
BOD	Business approval and oversight
System Admin	User, permission, and master data management

---

2. Product Scope

2.1 MVP Definition

The MVP focuses on establishing the essential infrastructure for managing projects and security operations.

The system must allow the company to:

- Create and manage client projects.
- Process FPK and its approval workflow.

- Manage multiple SPKs under one project.
- Monitor project readiness and deployment.
- Manage personnel and their assignments.
- Track active project locations and personnel counts.
- Monitor project and contract expiration.
- Provide task and notification visibility.
- Control access based on user roles.

2.2 MVP Prioritization

Priority	Definition
P0 — Must Have	Essential functionality required for MVP launch
P1 — Should Have	Important improvements that can follow after core workflows work
P2 — Could Have	Enhancements that are not required for initial launch

---

3. Business Entities & Relationships

Understanding the relationship between business entities is essential before designing the application.

3.1 Core Entities

Client

A company or organization that uses the security services.

Project

A security service engagement or job assigned to the company by a client.

A project represents the overall business engagement, not an individual contract document.

FPK

An internal work request document used to initiate and coordinate project preparation.

SPK

A formal contract document associated with a project.

Business rule: One project may contain multiple SPKs.

Site

A physical location where security personnel are deployed.

Area

An operational region responsible for managing one or more sites.

Personnel

Security employees assigned to projects and operational locations.

3.2 Proposed Entity Relationship

Client → Project → Multiple SPKs

Project → FPK / Site / Personnel Deployment

SPK → Contract Period / Personnel Quota / Contract Status

Area → Multiple Sites

Site → Assigned Personnel

Important: The exact relationship between Project, FPK, SPK, and Site must be validated before finalizing the database structure.

---

4. Roles & Permissions

4.1 Marketing

Objective: Manage clients, projects, and contractual documentation.

Features:

- Client Management
- Project Management

- FPK Management
- BOQ Attachment
- FPK Status Tracking
- SPK Management
- External Memo Management
- Client Response Tracking
- Contract Monitoring

Primary actions:

- Create Project
- Create FPK
- Submit FPK
- Revise FPK
- Input SPK
- Submit SPK for Verification
- Create External Memo

4.2 Operations

Objective: Ensure project readiness from an operational perspective.

Features:

- Operational Dashboard
- FPK Review
- Operational Assessment
- Survey Management
- Personnel Availability
- Personnel Mutation
- Replacement Monitoring

Primary actions:

- Review FPK
- Confirm Operational Readiness
- Request Survey
- Return FPK
- Confirm Personnel Release

4.3 Recruitment

Objective: Fulfill personnel requirements for projects.

Features:

- Recruitment Dashboard
- Personnel Requirement Review
- Personnel Sourcing
- Personnel Availability
- Personnel Handover
- Mutation Planning
- Replacement Tracking

Primary actions:

- Review Personnel Requirements
- Select Sourcing Method
- Submit Personnel Allocation
- Handover Personnel to HR

4.4 HR

Objective: Manage employee records and personnel assignments.

Features:

- Personnel Management
- Personnel Registration
- Personnel Assignment
- Personnel Status Management
- Personnel Mutation
- Personnel History

Primary actions:

- Add Personnel
- Edit Personnel
- Register Personnel
- Assign Personnel
- Update Personnel Status
- Process Personnel Mutation

4.5 PIC Area

Objective: Monitor and confirm field operations.

Features:

- Area Overview
- Site Overview
- Personnel Overview
- Project Monitoring
- Start Guard Confirmation
- Task Management

Primary actions:

- View Assigned Personnel
- View Active Projects
- Confirm Start Guard
- Complete Assigned Tasks

4.6 Procurement

Objective: Ensure project equipment and material requirements are available.

Features:

- Procurement Dashboard
- FPK Requirement Review
- Procurement Assessment
- Availability Confirmation
- Procurement Planning

Primary actions:

- Review Requirements
- Confirm Availability
- Mark Need to Order
- Submit Assessment

Actual purchasing and inventory management are not included in the MVP unless separately approved.

4.7 Finance

Objective: Maintain financial control and contract verification.

Features:

- Financial Dashboard
- BOQ Review
- Cost Estimation

- Margin Analysis
- FPK Financial Review
- SPK Verification
- FPK vs SPK Comparison
- Memo Financial Review

Primary actions:

- Review BOQ
- Input Estimated Cost
- Calculate Margin
- Submit Financial Assessment
- Verify SPK
- Return SPK for Correction

4.8 BOD

Objective: Provide business approval and executive oversight.

Features:

- Executive Dashboard
- Approval Center
- FPK Approval
- Memo Approval
- Escalation Management
- Contract Monitoring
- Delegation Management
- Decision History

Primary actions:

- Approve
- Return
- Reject
- Assign Delegate
- Review Escalation

4.9 System Admin

Objective: Maintain system configuration and access control.

Features:

- User Management
- Role Management
- Permission Management
- Data Scope Management
- Area Management
- Site Management
- Client Management
- Position Management
- PT Management
- Calendar Settings
- Audit Logs

Primary actions:

- Create User
- Edit User
- Assign Role
- Configure Permissions
- Manage Master Data
- View Audit Logs

---

5. MVP Feature Requirements

This section defines the actual features that must be delivered.

FEATURE 01 — Authentication & Role-Based Access Control

Priority: P0
Primary Role: All users / System Admin

Objective

Ensure users can securely access JISS according to their assigned roles and data permissions.

Functional Requirements

1. Users can log in to JISS.
2. Users can log out.
3. System Admin can create and manage user accounts.

4. System Admin can assign roles.
5. Users can have multiple roles where applicable.
6. System restricts access based on role permissions.
7. System restricts data visibility based on assigned area or organizational scope.
8. System records relevant user activities.

Acceptance Criteria

- Unauthorized users cannot access protected pages.
- Users only see data within their permitted scope.
- Restricted actions cannot be performed without permission.
- Changes to user permissions are reflected in subsequent access checks.

FEATURE 02 — Dashboard & Executive Overview

Priority: P0
Primary Role: All roles, with different views based on permissions.

Objective

Provide users with a centralized overview of relevant business and operational information.

Functional Requirements

1. Display project summaries.
2. Display active project counts.
3. Display active SPK counts.
4. Display project readiness.
5. Display personnel requirements and actual deployment.
6. Display tasks requiring attention.
7. Display upcoming contract expiration.
8. Display relevant notifications.
9. Allow navigation to detailed records.

Dashboard by Role

Role	Main Dashboard Information
Marketing	Projects, FPK, SPK, contract expiration
Operations	Project readiness, personnel availability

Recruitment	Personnel requirements and sourcing
HR	Personnel registration and assignments
PIC Area	Active sites and assigned personnel
Procurement	Pending procurement assessments
Finance	Pending financial reviews and SPK verification
BOD	Executive overview, pending approvals, escalations
System Admin	User and system overview

Acceptance Criteria

- Dashboard information is filtered based on user permissions.
- Summary numbers reflect the underlying records.
- Users can navigate from summary information to related details.

FEATURE 03 — Client Management

Priority: P0
Primary Role: Marketing / System Admin

Objective

Maintain centralized client information for project management.

Functional Requirements

1. View client list.
2. Search and filter clients.
3. Create client records.
4. Edit client information.
5. View client details.
6. View associated projects.

Minimum Data Fields

- Client Name
- Client Code

- Company Information
- Address
- Contact Person
- Contact Information
- Status

Acceptance Criteria

- A project must reference an existing client.
- Client information can be updated by authorized users.
- Duplicate client records should be prevented through an agreed unique identifier.

FEATURE 04 — Project Management

Priority: P0
Primary Role: Marketing
Supporting Roles: Operations, Recruitment, HR, PIC Area, Finance, BOD

Objective

Provide a centralized place to manage security service engagements.

Functional Requirements

1. Create a project.
2. View all projects.
3. Search and filter projects.
4. Edit project information.
5. View project details.
6. Associate multiple SPKs with one project.
7. View associated FPK records.
8. View associated sites and personnel deployments.
9. Monitor project status.
10. Monitor project end dates.
11. Display remaining contract or project duration.
12. Display personnel requirements and actual assignments.

Project List Information

- Project Name
- Client
- Project Code

- Number of Sites
- Number of SPKs
- Required Personnel
- Assigned Personnel
- Project Status
- Project End Date
- Remaining Duration

Project Detail Sections

1. Overview
2. Contract & SPK
3. FPK History
4. Sites & Deployment
5. Personnel
6. Activity History

Acceptance Criteria

- One project can contain multiple SPKs.
- Each project is associated with a client.
- Authorized users can view project information.
- Project end dates are visible.
- Remaining duration is calculated from the applicable end date.
- Personnel counts reflect current assignments.
- Project status is not automatically assumed to be identical to SPK status.

FEATURE 05 — FPK Management & Approval Workflow

Priority: P0
Primary Role: Marketing
Supporting Roles: Operations, Recruitment, Procurement, Finance, BOD

Objective

Manage internal work requests and coordinate cross-department project preparation.

Functional Requirements

Marketing

1. Create FPK.

2. Edit FPK.
3. Upload BOQ attachment.
4. Upload supporting deal documentation.
5. Submit FPK.
6. View FPK status.
7. Revise returned FPK.

Operations

1. Review operational requirements.
2. Assess location readiness.
3. Assess personnel feasibility.
4. Request survey if required.
5. Return FPK with reasons.

Recruitment

1. Review personnel requirements.
2. Determine sourcing method.
3. Submit recruitment assessment.

Procurement

1. Review material requirements.
2. Confirm availability.
3. Identify items requiring procurement.

Finance

1. Review BOQ.
2. Input estimated cost.
3. Calculate project margin.
4. Submit financial assessment.

BOD

1. Review FPK.
2. Approve FPK.
3. Return FPK.
4. Reject FPK.

Proposed Workflow

1. Marketing creates FPK.
2. Marketing submits FPK.
3. Operations, Recruitment, and Procurement perform their respective reviews.

4. Finance performs financial assessment after required reviews are completed.
5. BOD reviews the FPK.
6. FPK is approved, returned, or rejected.
7. Returned FPK goes back to Marketing for revision.

Acceptance Criteria

- Each review is assigned to the appropriate role.
- Each reviewer can see relevant FPK information.
- Each review decision is recorded.
- Returned FPK includes a reason.
- Marketing can revise and resubmit returned FPK.
- Approval history is available.
- FPK status reflects the latest workflow stage.

FEATURE 06 — SPK Management & Verification

Priority: P0
Primary Role: Marketing / Finance

Objective

Manage official contract documents and verify their consistency with the approved FPK.

Functional Requirements

Marketing

1. Input SPK information.
2. Upload SPK documents.
3. Associate SPK with an existing project.
4. Submit SPK for verification.
5. Correct returned SPK information.

Finance

1. Review SPK information.
2. Compare SPK with FPK.
3. Identify discrepancies.
4. Mark SPK as correct or incorrect.
5. Return SPK for correction.
6. Verify SPK.

Minimum Data Fields

- SPK Number
- Project
- Client
- Contract Value
- Contract Start Date
- Contract End Date
- Personnel Quota
- Site
- SPK Document
- Verification Status

Acceptance Criteria

- One project can have multiple SPKs.
- Every SPK is associated with a project.
- Finance can compare SPK information against the relevant approved FPK.
- Incorrect SPK information can be returned to Marketing.
- SPK verification history is recorded.
- Only verified SPKs can reach the verified/active contract state.

FEATURE 07 — Personnel Management

Priority: P0
Primary Role: HR
Supporting Roles: Recruitment, Operations, PIC Area

Objective

Maintain a centralized personnel database and track personnel assignments.

Functional Requirements

1. View personnel list.
2. Search personnel.
3. Filter personnel by area, site, and status.
4. Create personnel records.
5. Edit personnel information.
6. Register new personnel.
7. Assign personnel to sites.
8. Update personnel status.

9. View personnel assignment history.
10. View current deployment information.

Minimum Data Fields

- Personnel ID
- Full Name
- Position
- Area
- Site
- Employment Status
- Assignment Status
- Start Assignment Date
- Uniform Size
- Shoe Size

Acceptance Criteria

- Personnel records have unique identifiers.
- Personnel assignments reference valid sites.
- Personnel status is visible.
- Authorized users can see assignment history.
- Current assignments are distinguishable from previous assignments.

FEATURE 08 — Site & Area Management

Priority: P0
Primary Role: System Admin
Supporting Roles: Operations, HR, PIC Area

Objective

Maintain organizational and operational location information.

Functional Requirements

1. Create area records.
2. Edit area records.
3. Create site records.
4. Edit site records.
5. Associate sites with areas.
6. View site details.

7. View personnel assigned to each site.
8. View active projects associated with sites.

Site Information

- Site Name
- Site Code
- Client
- Area
- Project
- Associated SPK
- Required Personnel
- Assigned Personnel
- Operational Status
- Contract End Date

Acceptance Criteria

- Each site is associated with an area.
- Authorized users can view sites within their scope.
- Personnel counts are based on active assignments.
- Project end dates and relevant contract dates are accessible.

FEATURE 09 — Personnel Deployment & Operational Monitoring

Priority: P0
Primary Role: Operations / PIC Area
Supporting Roles: HR, Recruitment, Marketing

Objective

Monitor personnel deployment and ensure project locations are operationally ready.

Functional Requirements

1. View active deployment locations.
2. View personnel requirements per site.
3. View actual assigned personnel per site.
4. View personnel assigned to each location.
5. Identify sites with personnel shortages.

6. View project end dates.
7. Display remaining time before project or contract expiration.
8. Confirm personnel start guard.
9. Monitor operational status.
10. View deployment changes.

Primary Information

- Project Name
- Client
- Site
- Required Personnel
- Assigned Personnel
- Personnel Shortage
- Operational Status
- Start Date
- End Date
- Remaining Duration

Acceptance Criteria

- Active deployment locations are visible.
- Users can identify personnel assigned to each location.
- Personnel shortage is calculated from required versus assigned personnel.
- Remaining duration is calculated using the relevant end date.
- PIC Area can confirm start guard.
- Confirmation is recorded with user and timestamp.

FEATURE 10 — Task & Notification Management

Priority: P0
Primary Role: All operational roles

Objective

Ensure cross-department tasks are visible, assigned, and completed within the required timeline.

Functional Requirements

1. Generate tasks from business workflows.
2. Assign tasks to responsible users or roles.

3. Display task lists.
4. Display task deadlines.
5. Display task status.
6. Notify users about new tasks.
7. Notify users about approaching deadlines.
8. Notify users about overdue tasks.
9. Escalate eligible overdue tasks.
10. Allow users to access the related project or document.

Task Information

- Task Title
- Related Project
- Related FPK / SPK
- Assigned Role
- Assigned User
- Created Date
- Due Date
- Status
- Priority

Acceptance Criteria

- Users can only see tasks within their permissions.
- Tasks have clear ownership and deadlines.
- Completing a task updates the related workflow.
- Overdue tasks can be identified.
- Escalation follows configured business rules.

FEATURE 11 — Contract Expiration & Renewal Monitoring

Priority: P0
Primary Role: Marketing
Supporting Roles: Finance, BOD

Objective

Monitor contracts nearing expiration and facilitate renewal or termination processes.

Functional Requirements

1. Display upcoming contract expiration.
2. Calculate remaining contract duration.
3. Generate renewal tasks at the configured timeline.
4. Create external renewal memos.
5. Record memo submission.
6. Upload proof of memo delivery.
7. Record client responses.
8. Track renewal decisions.
9. Initiate SPK extension or demobilization processes.

Proposed Business Timeline

Timeline	Activity
H-75	System creates renewal preparation task
H-60	Marketing sends external memo
H-30	Check client response
H-30 without response	Escalate to BOD

Client Response Options

- Agree
- Negotiate
- Not Continuing

Acceptance Criteria

- Contract expiration is calculated from the applicable SPK end date.
- Renewal tasks are generated according to the configured schedule.
- Marketing can record client responses.
- BOD can view escalated renewal cases.
- Contract outcomes are recorded.

FEATURE 12 — Master Data & Audit Log

Priority: P0
Primary Role: System Admin

Objective

Maintain consistent reference data and traceability across the application.

Functional Requirements

1. Manage client master data.
2. Manage area master data.
3. Manage site master data.
4. Manage PT master data.
5. Manage position master data.
6. Manage working calendar.
7. Record important data changes.
8. View audit history.

Acceptance Criteria

- Master data can only be changed by authorized users.
- Relevant changes record the actor and timestamp.
- Historical records remain traceable.
- Changes to master data do not silently erase historical project information.

---

6. Cross-Functional Business Rules

The following rules apply across multiple features.

6.1 Project Management

1. A project represents a security service engagement for a client.
2. One project may contain multiple SPKs.
3. Project status and SPK status must be managed separately.
4. Project information should consolidate related operational information.

6.2 FPK Approval

1. Marketing initiates FPK.
2. Operations, Recruitment, and Procurement conduct their respective reviews.
3. Finance performs financial assessment.
4. BOD provides the final business decision.
5. Returned FPK must include a reason.
6. Review history must be preserved.

6.3 Jalan Tanpa SPK

1. Operational preparation may proceed after FPK approval, subject to applicable business authorization.
2. SPK issuance may occur after operational activities have started.
3. Projects operating without verified SPK must be identifiable.
4. The system should monitor the duration and outstanding contract status.
5. Applicable escalation rules must be followed.

6.4 Personnel Assignment

1. Personnel must be associated with an appropriate site and area.
2. Personnel counts must reflect active assignments.
3. Personnel shortages must be visible.
4. Personnel changes must be recorded.
5. Historical assignments must remain accessible.

6.5 Contract Monitoring

1. Each SPK has its own validity period.
2. Multiple SPKs under one project may have different end dates.
3. Contract expiration alerts must be based on individual SPK dates.
4. Project-level status must not automatically change simply because one SPK expires.

---

7. MVP Information Architecture

Proposed navigation structure:

Main Navigation

Overview

- Dashboard

Business

- Clients
- Projects
- FPK

- SPK
- External Memos

Operations

- Areas
- Sites
- Personnel
- Deployment

Workspace

- My Tasks
- Approvals
- Notifications

Administration

- Users
- Roles & Permissions
- Master Data
- Audit Logs
- Settings

Navigation visibility and available actions must be controlled by RBAC and data scope.

---

8. Out of Scope for MVP

The following functionality is not included in the initial MVP unless separately approved.

1. Full payroll management.
2. Employee attendance and biometric tracking.
3. Full inventory management.
4. Actual procurement transaction management.
5. Invoice and tax invoice processing.
6. Client-facing portal.
7. Automated financial accounting integration.
8. Advanced business intelligence and predictive analytics.
9. Mobile native application.
10. Automated integration with external HR or ERP systems.

These items can be considered for future product iterations.

---

9. Non-Functional Requirements

9.1 Security

- Role-based access control.
- Data scope restrictions.
- Secure authentication.
- Protected business documents.
- Activity and audit tracking.

9.2 Usability

- Consistent interface across modules.
- Clear status indicators.
- Easy navigation between related entities.
- Search and filtering for large datasets.
- Clear feedback for successful and unsuccessful actions.

9.3 Performance

- Dashboard should load within an agreed performance target.
- Tables should support pagination.
- Search and filtering should remain usable with growing data volumes.

9.4 Data Integrity

- Unique identifiers for core entities.
- Referential integrity between projects, clients, SPKs, sites, and personnel.
- Historical records should remain traceable.
- Important business actions must be recorded.

---

10. MVP Success Metrics

The following metrics are proposed for evaluating MVP effectiveness.

Metric	Measurement
Project Visibility	Percentage of active projects recorded in JISS
Personnel Visibility	Percentage of active deployments with assigned personnel data
Personnel Coverage	Ability to identify required vs actual personnel per site
Contract Visibility	Percentage of active SPKs with complete validity information
Workflow Visibility	Percentage of FPK records with traceable review status
Task Completion	Percentage of assigned tasks completed within deadline
Data Completeness	Percentage of required fields completed

Actual targets should be established with stakeholders after baseline data is available.

---

11. Open Decisions & Stakeholder Validation

These questions must be resolved before finalizing the design and development requirements.

No.	Question	Impact
1	When exactly is a Project created: when the client deal is confirmed or after FPK approval?	Project lifecycle
2	Can one Project have multiple FPKs?	Entity relationship
3	Can one FPK generate multiple SPKs?	Contract relationship
4	Can one Project have multiple sites?	Project and deployment structure
5	Can one SPK cover multiple sites?	Contract and site relationship
6	Can one site have multiple active SPKs?	Contract and operational structure

7	Who can create and edit Project records?	RBAC
8	Can a project operate before SPK verification?	Operational authorization
9	What happens when one SPK expires but other SPKs under the same Project remain active?	Project status
10	What is the exact calculation basis for personnel quota: Project, SPK, or Site?	Personnel monitoring
11	Which user confirms the official start of operations?	Start guard workflow
12	What are the exact escalation thresholds and recipients?	Task management

---

12. Recommended Design & Development Sequence

The following sequence is a proposed implementation dependency, not a confirmed delivery schedule.

Phase	Focus	Features
01	System Foundation	Authentication, RBAC, Master Data
02	Business Foundation	Client & Project Management
03	Contract Workflow	FPK, Review, Approval, SPK
04	Operational Management	Personnel, Site, Area, Deployment
05	Monitoring	Dashboard, Tasks, Notifications
06	Contract Lifecycle	Expiration, Renewal, External Memo

---

13. Product Designer Deliverables

The following deliverables are recommended for the MVP design phase.

1. Business Process Flow
2. Entity Relationship Diagram
3. Role & Permission Matrix
4. Information Architecture
5. User Flows per Feature
6. Low-Fidelity Wireframes
7. High-Fidelity UI Design
8. Design System
9. Interactive Prototype
10. Developer Handoff & Design Specifications

Design principle: Prioritize operational visibility, clear ownership, traceable workflows, and actionable information over decorative dashboard elements.

END OF DOCUMENT

JISS MVP — Working Draft v0.1

This document is intended for product, design, engineering, and stakeholder alignment. Business rules, permissions, entity relationships, and workflow conditions must be validated before implementation.
